

#### Rainwater -

should be used by people, plants and trees and should replenish groundwater with only a small portion making its way to our streams. If it runs off quickly, it is

2 Rain Barrel – an easy to make container that saves rainwater for use during a dry period. This saves you money on your water bill and helps protect our your driveway is an impervious surface along with the street and roof. This means that rainwater cannot make its way into the ground where it would water plants and replenish groundwater. Instead it runs off quickly to stream and creeks.

4 Rain Garden – an easy to plant garden that uses native plants to help clean stormwater runoff and allows it to replenish 5 Groundwater – water that is found underground and supplies well water for our cities, farmers and families. It also provides the yearround flow for many streams and creeks.

6 Surface Water - water that is found in

vater that is found in streams nd rivers and provides water or our cities, industries and ecreation. When rain occurs, vater rushes from impervious urfaces picking up pollutants nat are on the ground, arrying them straight to the reek or stream. The City of Birmingham and Jefferson County Stormwater Management Programs would like to thank all the partners who contributed to the 2017 Stormwater Calendar. We would like to send a special thanks to the Alabama Rain Barrel Project partners (Alabama Clean Water Partnership, Alabama Department Environmental Management, World Wildlife Fund, Coca Cola and Alabama Environmental Council) for allowing us use of their graphic for the front cover and back covers and Jennie Powers, working with Alabama Water Watch (AWW) at Auburn University, for use of the America's Amazon infographic she created displayed on this page.

The graphic chosen for the 2017 Stormwater Calendar promotes sustainable stormwater friendly practices - capturing and storing rainwater from the roof to reapply in the yard. This water conservation practice provides free irrigation and reduces polluted runoff because the rain that was captured would have otherwise flowed over a paved surface or lawn, picked up and carried items such as pet waste, lawn chemicals and trash, and drained untreated directly into our local creeks and rivers.

Each month the calendar highlights a pollutant and the negative effects that pollutant has on local water quality along with simple prevention strategies you can incorporate in your everyday life. These helpful tips will assist you to become a better steward of your community and watershed. We ask you to share these helpful tips with your neighbors, coworkers and family.

### Did you know that Alabama has more than 132,000 miles of rivers and streams? You do now!

A newly created infographic (displayed to the right) was produced by the AWW IT assistant Jennie Powers for one of her classes at Auburn University. Jennie's infographic promotes Alabama's AWWsome aquatic biodiversity which ranks NUMBER 1 among all 50 states including freshwater fish, snails, mollusks, crayfish and turtles. The creation of this infographic initiated a greatly needed exchange among state agencies, universities and others about the estimates of our aquatic resources here in Alabama. This exchange resulted in the Geological Survey of Alabama conducting an updated GIS analysis of Alabama streams using the much-improved digital stream data, the USGS National Hydrography Dataset which contains much more detail than the previously used 1:100,000 scale data. In fact, the number of river miles increased about 55,000 miles - from more than 77,000 reported back in the 1990s to over 132,000 miles! This AWWsome infographic can be downloaded for free at: www.alabamawaterwatch.org/ resources/publications.

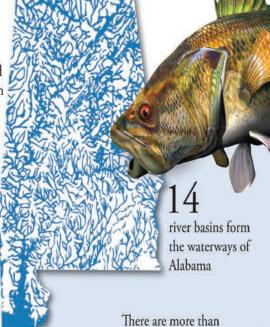

### **GET INVOLVED!**

Become a certified water quality monitor through the AWW Program. It is easy and FREE! You will learn how to evaluate physical, chemical and biological characteristics of your waterways by attending a FREE water chemistry, bacteriological or stream biomonitoring training workshop, or all three! Trainings are offered throughout the year, visit alabamawaterwatch.org to learn more.

AWW is a citizen volunteer water quality monitoring program covering all of the major river basins in Alabama. AWW uses EPA-approved monitoring plans with a community-based approach to train citizens to monitor conditions and trends in their local waterbodies.

# America's Amazon

10% of the freshwater resources in the continental United States flow through or originate in Alabama.

132,000 miles of rivers and streams in Alabama. That's enough to circle the earth 5 times!

### Top 5 States Freshwater Fish Biodiversity

Rank	State	# Species
